

Solana Launch Suite

Complete User Guide

Version 1.0.0

- ✓ Secure Wallet Generator
- ✓ Launch Trading Manager
- ✓ Real-time Protection
- ✓ Cross-Platform Support
- ✓ 100% Local & Safe

Your keys, your crypto, your control.

1. Quick Start Guide

What You'll Accomplish

In just 10 minutes, you'll have secure wallets generated and be ready for token launch trading!

1

Download & Install

Download the installer for your operating system:

- **Windows:** Solana-Launch-Suite-Setup.exe
- **Mac:** Solana-Launch-Suite.dmg
- **Linux:** Solana-Launch-Suite.ApplImage

Screenshot: Download page with platform options

2

First Launch

Double-click the installed application. You'll see a welcome screen:

Screenshot: Welcome splash screen

Click "Get Started!" to begin using the application.

3

Generate Your First Wallets

Navigate to the "Wallet Generator" tab and:

1. Set wallet count (start with 5-10 for testing)
2. Enter a secure password
3. Click "Generate Launch Wallets"
4. Save the generated file securely

Screenshot: Wallet generator interface

Critical First Steps

- **Backup immediately:** Copy wallet files to multiple secure locations
- **Password security:** Store passwords separately using a password manager
- **Test first:** Always test with small amounts before using large sums

Common Use Cases

For New Token Developers

Generate 5-10 wallets to create organic buying patterns during your token launch. This helps establish initial trading activity and prevents sniper bots from manipulating your launch.

For Experienced Traders

Use 20-50 wallets for sophisticated trading strategies across multiple launches. Implement profit-taking rules and automated trading patterns.

For Launch Protection

Deploy the real-time protection system to automatically detect and counter sniper attacks during token launches.

2. Installation Instructions

System Requirements

- **RAM:** 4GB minimum, 8GB recommended
- **Storage:** 500MB free space
- **Internet:** Required for downloads and trading (not for wallet generation)
- **Operating System:** Windows 10+, macOS 10.15+, or Ubuntu 18.04+

Windows Installation

1

Download the Installer

Download `Solana-Launch-Suite-Setup.exe` from the official website.

Screenshot: Windows download button

2

Run the Installer

Double-click the downloaded file. Windows may show a security warning:

- Click "More info" if Windows Defender blocks it
- Click "Run anyway" to proceed
- This is normal for new applications

Screenshot: Windows security dialog

3

Follow Installation Wizard

1. Choose installation directory (default is recommended)
2. Select "Create desktop shortcut" for easy access
3. Click "Install" and wait for completion
4. Launch the application when installation finishes

Screenshot: Installation wizard

1

Download the DMG File

Download `Solana-Launch-Suite.dmg` from the official website.

2

Mount and Install

1. Double-click the DMG file to mount it
2. Drag "Solana Launch Suite" to the Applications folder
3. Eject the DMG file

Screenshot: macOS DMG installation

3

First Launch (Important!)

macOS may block the app initially. To resolve:

1. Try to open the app from Applications
2. If blocked, go to System Preferences → Security & Privacy
3. Click "Open Anyway" next to the app name
4. Or right-click the app and select "Open"

macOS Security Notice

This security prompt is normal for downloaded applications. The app is safe to use.

Linux Installation

1

AppImage (Recommended)

Download `Solana-Launch-Suite.AppImage`

```
# Make executable chmod +x Solana-Launch-Suite.AppImage #  
Run the application ./Solana-Launch-Suite.AppImage
```

2

Debian/Ubuntu Package

For Ubuntu and Debian systems:

```
# Download and install wget  
https://releases.example.com/solana-launch-suite.deb sudo  
dpkg -i solana-launch-suite.deb # Fix dependencies if  
needed sudo apt-get install -f
```

✓ Installation Complete!

You should now see the Solana Launch Suite icon on your desktop or in your applications menu. The first launch will show a welcome screen with basic setup instructions.

3. Wallet Generator

Security Notice

All wallets are generated completely locally on your device. Private keys and seed phrases never leave your computer. This is the most secure way to create wallets for trading.

Using the GUI Interface

1

Open Wallet Generator

Click on the "Wallet Generator" tab in the main application window.

Screenshot: Wallet Generator tab highlighted

Generate Launch Trading Wallets

In the "Launch Trading Wallets" section:

1. **Number of Wallets:** Choose 5-50 (start with 10 for testing)
2. **Password:** Enter a strong password or leave blank for auto-generation
3. Click "Generate Launch Wallets"

Screenshot: Launch wallet generation form

Password Security

- Use a unique password you've never used before
- Store it in a password manager
- Never store the password with the wallet file

3

Generate Master Wallet

Create your main funding wallet:

1. Go to "Master Developer Wallet" section
2. Enter a strong password
3. Click "Generate Master Wallet"
4. This wallet will fund your trading operations

Screenshot: Master wallet generation

Understanding Generated Files

File Structure

Wallets are saved in the `generated-wallets` folder:

```
generated-wallets/ ├── launch_wallets_2024-01-15T10-30-00.json  
                   ├── master_wallets_2024-01-15T10-30-00.json └──  
                   README_SECURITY.md
```

What's Inside Each File

Each wallet file contains:

- **Wallet Address:** Your public Solana address
- **Private Key:** For importing into wallets (encrypted)
- **Seed Phrase:** 12-word recovery phrase (encrypted)

- **Metadata:** Creation time and purpose

✓ Security Features

- **AES-256 Encryption:** Military-grade encryption
- **PBKDF2 Key Derivation:** 100,000 iterations
- **BIP44 Standard:** Compatible with all major wallets
- **Local Generation:** Never touches the internet

Importing Wallets

Into Phantom Wallet

1

Access Import Function

1. Open Phantom wallet extension or app
2. Click the wallet menu (top left)
3. Select "Add Account"
4. Choose "Import Private Key" or "Import from Seed Phrase"

2

Enter Wallet Information

1. Enter your 12-word seed phrase OR private key
2. Give the wallet a name (e.g., "LaunchWallet_1")
3. Click "Import"
4. Your wallet is now ready to use!

Into Solflare Wallet

1

Import Process

1. Open Solflare app or extension
2. Click "Access Wallet"
3. Select "Import Wallet"
4. Enter your seed phrase
5. Set a password and save

Import Security

- Only import on devices you trust
- Never enter seed phrases on websites
- Double-check wallet addresses after import
- Test with small amounts first

4. Launch Trading Manager

Purpose

The Launch Trading Manager allows you to coordinate multiple wallets for token launches, creating natural buying patterns and helping establish healthy trading activity.

Setting Up Trading

1

Load Your Wallets

In the "Launch Trading" tab:

1. Click "Load Wallet File"
2. Select your generated wallet file
3. Enter the password
4. Confirm wallet loading

Screenshot: Wallet loading interface

2

Fund Your Wallets

Before trading, wallets need SOL:

1. Fund your master wallet with SOL
2. Use "Fund Wallets from Master" feature
3. Set amount per wallet (e.g., 0.1 SOL each)
4. Confirm distribution

Funding Strategy

Start with small amounts (0.05-0.1 SOL per wallet) for testing. You can always add more later.

3

Set Target Token

Configure your trading target:

1. Enter token contract address
2. Select platform (Pump.fun, Pump.swap, etc.)
3. Set trading parameters
4. Verify configuration

Screenshot: Token configuration form

Executing Trades

Coordinated Buying

1

Set Up Buy Parameters

- **Wallet Selection:** Choose which wallets to use
- **Amount per Wallet:** SOL amount each wallet spends
- **Timing:** Delays between purchases (1-5 seconds recommended)
- **Randomization:** Add random delays for natural patterns

2

Execute Coordinated Buy

1. Review your settings
2. Click "Coordinated Buy"
3. Monitor execution progress
4. Check transaction confirmations

Screenshot: Buy execution progress

Profit Taking Strategies

1

Manual Profit Taking

Sell portions of your holdings:

- **25% Sell:** Take initial profits
- **50% Sell:** Secure substantial gains
- **75% Sell:** Lock in most profits
- **100% Sell:** Complete exit

2

Automated Profit Taking

Set up automatic selling rules:

1. Set profit target (e.g., +100%)
2. Set stop loss (e.g., -20%)
3. Enable automatic monitoring
4. System sells when targets hit

Monitoring & Management

Real-Time Statistics

The dashboard shows:

- **Total Balance:** SOL across all wallets
- **Token Holdings:** Current token positions
- **Profit/Loss:** Realized and unrealized P&L
- **Success Rate:** Percentage of successful trades

Screenshot: Trading statistics dashboard

Wallet Management

1

Balance Monitoring

Regularly check wallet balances:

1. Click "Update Balances"
2. Review individual wallet status
3. Identify wallets needing funding
4. Plan rebalancing if needed

2

Profit Withdrawal

Move profits to secure storage:

1. Set minimum balance to keep (for fees)
2. Enter your secure wallet address
3. Click "Withdraw Profits"
4. Confirm transactions

✓ Best Practices

- Start with small amounts to test the system
- Use natural timing delays (1-5 seconds between buys)
- Vary purchase amounts for realistic patterns
- Monitor markets and adjust strategies
- Withdraw profits regularly to secure wallets

5. Security Best Practices

Critical Security Rules

Following these rules is essential for protecting your funds. Crypto security requires personal responsibility - there are no "password reset" options!

What You Should NEVER Do

1

Never Share Private Information

- Never share private keys with anyone
- Never share seed phrases (12-word recovery phrases)
- Never enter seed phrases on websites
- Never screenshot or photograph private keys

2

Never Store Passwords Insecurely

- Never store passwords in the same folder as wallet files
- Never use the same password for multiple wallet files
- Never save passwords in browser or cloud notes
- Never write passwords on paper near your computer

3

Never Trust Unverified Sources

- Never download the software from unofficial sources
- Never trust "urgent" messages asking for wallet access
- Never click suspicious links in crypto communities
- Never install modified versions of the software

What You Should ALWAYS Do

1

Backup Everything Multiple Times

1. Copy wallet files to at least 3 different locations
2. Use encrypted USB drives for offline backups
3. Store backups in different physical locations
4. Test backups regularly to ensure they work

2

Use Strong, Unique Passwords

1. Generate passwords with at least 16 characters
2. Include uppercase, lowercase, numbers, and symbols
3. Use a different password for each wallet file
4. Store passwords in a reputable password manager

Password Manager Recommendations

- **1Password:** Excellent security and ease of use
- **Bitwarden:** Open source and affordable
- **LastPass:** Widely used and feature-rich

3

Test With Small Amounts First

- Start with 0.01-0.1 SOL for initial testing
- Verify all functions work correctly
- Practice importing wallets
- Test trading with minimal amounts

Advanced Security Measures

Hardware Wallet Integration

For storing large amounts:

- **Ledger Nano S/X:** Popular and well-supported
- **Trezor Model T:** Open source hardware wallet
- **Use for:** Long-term storage of profits

- **Not for:** Day-to-day trading operations

Multi-Signature Wallets

For team operations:

- Require multiple signatures for transactions
- Prevent single points of failure
- Useful for business operations
- More complex but more secure

Network Security

1

Secure Your Connection

- Use secure WiFi networks only
- Consider using a VPN for trading
- Avoid public WiFi for wallet operations
- Keep your firewall enabled

2

Computer Security

- Keep your operating system updated
- Use reputable antivirus software
- Don't install suspicious software
- Regular malware scans

Emergency Procedures

If You Suspect Compromise

Immediate Actions

1. **Stop all trading immediately**
2. **Transfer funds to secure wallets**
3. **Generate new wallets**
4. **Scan computer for malware**
5. **Change all passwords**

Recovery Planning

Before you need it, plan for:

- How to access backups quickly
- Alternative devices for wallet access
- Emergency contact procedures
- Funds recovery processes

Security Checklist

Before starting serious trading:

- ☐ Generated wallets with strong passwords
- ☐ Backed up wallet files to multiple locations
- ☐ Stored passwords in password manager
- ☐ Tested wallet import process
- ☐ Verified small transactions work
- ☐ Set up hardware wallet for profits
- ☐ Created emergency recovery plan

6. Troubleshooting Guide

Quick Diagnosis

Most issues can be resolved quickly. This section covers the most common problems and their solutions.

Installation Problems

Windows Issues

1

"Windows protected your PC" Message

Solution:

1. Click "More info" in the warning dialog
2. Click "Run anyway" button
3. This is normal for new applications

Screenshot: Windows Defender dialog

2

"App can't run on this PC" Error

Cause: 32-bit system or old Windows version

Solution:

- Ensure you have Windows 10 64-bit or later
- Download the correct version for your system
- Update Windows if necessary

macOS Issues

1

"App is damaged and can't be opened"

Solution:

1. Go to System Preferences → Security & Privacy
2. Click "Open Anyway" next to the blocked app
3. Or right-click the app and select "Open"

2

"Developer cannot be verified"

Solution:

1. Hold Option key and right-click the app
2. Select "Open" from the context menu
3. Click "Open" in the confirmation dialog

Linux Issues

1

AppImage Won't Launch

Solution:

```
# Make the file executable chmod +x Solana-Launch-Suite.AppImage # Install FUSE if needed (Ubuntu/Debian)
sudo apt install fuse # Try launching from terminal
./Solana-Launch-Suite.AppImage
```

Wallet Generation Issues

1

"Generation Failed" Error

Common Causes & Solutions:

- **Insufficient disk space:** Free up 1GB of space
- **Permission issues:** Run as administrator (Windows) or check folder permissions
- **Antivirus blocking:** Add exception for the application

2

"Invalid Password" When Loading

Solutions:

1. Double-check password (case-sensitive)
2. Try typing instead of copy/paste
3. Ensure correct wallet file is selected
4. Check if file was corrupted during transfer

3

"Cannot Load Wallet File"

Troubleshooting Steps:

1. Verify file path is correct
2. Check file isn't corrupted (size should be >1KB)
3. Ensure file has .json extension
4. Try copying file to a different location

Trading Problems

1

"Transaction Failed" Errors

Common Causes:

- **Insufficient SOL balance:** Add more SOL to wallet
- **Network congestion:** Wait and retry
- **Invalid token address:** Verify contract address
- **Slippage too low:** Increase slippage tolerance

2

"RPC Connection Failed"

Solutions:

1. Check internet connection
2. Try changing RPC endpoint in settings
3. Wait a few minutes and retry
4. Restart the application

3

Coordinated Buy Partially Fails

Normal Behavior: Some transactions may fail due to network conditions

Actions:

1. Check which wallets succeeded
2. Retry failed wallets individually
3. Adjust timing parameters
4. Ensure sufficient SOL in all wallets

Application Issues

1

Application Won't Start

Solutions:

1. Restart your computer
2. Check if another instance is running
3. Run as administrator (Windows)
4. Check system requirements
5. Reinstall the application

2

Interface Looks Broken

Solutions:

- Zoom out if interface appears too large
- Maximize the window
- Update graphics drivers
- Restart the application

Performance Issues

Solutions:

- Close other heavy applications
- Ensure sufficient RAM (4GB minimum)
- Check for system updates
- Restart the application

Getting Additional Help

Self-Help Tools

- **Security Audit:** Help → Security Audit
- **Connection Test:** Settings → Test Connection
- **Log Files:** Help → View Logs
- **Reset Settings:** Settings → Reset to Defaults

Contact Support

If problems persist:

1. Check the FAQ section in the app
2. Visit the community forum
3. Contact support with:
 - Your operating system version
 - Application version
 - Description of the problem
 - Steps you've already tried
 - Error messages (screenshot if possible)

What NOT to Share with Support

- Never share private keys or seed phrases
- Never share wallet passwords
- Never send wallet files via email
- Only share error messages and general issues

7. ⚡ Advanced Features

Who This Section Is For

Advanced features are for experienced users who want maximum control and customization. Basic users can skip this section.

Command Line Interface

Installation

The CLI tools are included with the desktop application:

```
# Navigate to installation directory cd "C:\Program Files\Solana
Launch Suite" # Windows cd "/Applications/Solana Launch
Suite.app/Contents/Resources" # macOS cd "~/Applications/solana-
launch-suite" # Linux # Run CLI commands node tools/wallet-
cli.js --help
```

CLI Commands

1

Generate Wallets

```
# Generate 10 wallets with password node tools/wallet-  
cli.js generate --count 10 --password "mySecurePass123" #  
Generate with auto password node tools/wallet-cli.js  
generate --count 5 # Custom output directory node  
tools/wallet-cli.js generate --count 10 --output "./my-  
wallets"
```

2

Master Wallet

```
# Generate master wallet node tools/wallet-cli.js master --  
password "masterPass456" # Generate to specific directory  
node tools/wallet-cli.js master --output "./secure-folder"
```

3

File Management

```
# List all wallet files node tools/wallet-cli.js list #  
Load and validate file node tools/wallet-cli.js load --file  
"launch_wallets_2024.json" --password "myPass" # Run  
security audit node tools/wallet-cli.js audit # Interactive  
demo node tools/wallet-cli.js demo
```

Custom Configuration

RPC Endpoints

Configure custom RPC endpoints for better performance:

```
// In config file or settings { "rpcUrl": "https://your-premium-rpc.com", "wsUrl": "wss://your-premium-ws.com", "commitment": "confirmed", "timeout": 30000 }
```

Trading Parameters

1

Advanced Buy Settings

- **Slippage Tolerance:** 1-20% (default: 10%)
- **Priority Fee:** Micro-lamports for faster execution
- **Max Retries:** Number of retry attempts
- **Retry Delay:** Milliseconds between retries

2

Timing Configuration

```
{ "coordinatedBuy": { "baseDelay": 1000, // Base delay in ms "randomDelay": 2000, // Additional random delay "maxConcurrent": 5, // Max simultaneous transactions "batchSize": 3 // Wallets per batch } }
```

Analytics & Reporting

Custom Reports

1

Generate Trading Report

Create detailed performance reports:

- Profit/loss analysis
- Success rate statistics
- Wallet performance ranking
- Transaction history

2

Export Options

- **CSV:** For spreadsheet analysis
- **JSON:** For programmatic processing
- **PDF:** For presentation/reporting

Performance Monitoring

Track key metrics:

- **Response Time:** Transaction execution speed
- **Success Rate:** Percentage of successful trades
- **Profit Margins:** Average profit per trade
- **Gas Efficiency:** Transaction fee optimization

Automation & Scripting

Automated Trading Rules

1

Profit Taking Rules

```
{ "profitTaking": { "enabled": true, "rules": [ {  
  "trigger": "profit_percent", "value": 50, "action":  
  "sell_percent", "amount": 25 }, { "trigger":  
  "profit_percent", "value": 100, "action": "sell_percent",  
  "amount": 50 } ] } }
```

2

Stop Loss Protection

```
{ "stopLoss": { "enabled": true, "percentage": -20,  
  "action": "sell_all", "cooldown": 300000 // 5 minutes } }
```

Custom Scripts

For developers who want to extend functionality:

```
const { WalletGenerator } =  
require('./src/services/walletGenerator'); const {  
LaunchTradingManager } =  
require('./src/services/launchTradingManager'); // Custom wallet  
generation const generator = new WalletGenerator({ outputDir:  
'./custom-wallets', encryptionStrength: 'maximum' }); // Custom  
trading logic const trading = new LaunchTradingManager(); await  
trading.loadWallets('my-wallets.json', 'password'); await  
trading.customStrategy({ buyPattern: 'fibonacci', sellPattern:  
'trailing_stop', riskLevel: 'conservative' });
```

Enhanced Security

Multi-Signature Integration

For team operations:

- Require multiple approvals for large transactions
- Distribute control among team members
- Prevent single points of failure
- Audit trails for all operations

Hardware Security Module (HSM)

For enterprise security:

- Hardware-based key storage
- Tamper-resistant operations
- Compliance with security standards
- Professional-grade protection

API Integration

REST API Endpoints

For custom integrations:

```
POST /api/v1/wallets/generate GET  
/api/v1/wallets/balance/{address} POST /api/v1/trading/buy POST  
/api/v1/trading/sell GET /api/v1/stats/performance
```

WebSocket Feeds

Real-time data streams:

- Transaction confirmations
- Balance updates
- Trading signals
- Performance metrics

Advanced Feature Disclaimer

Advanced features require technical knowledge and carry additional risks.
Always test thoroughly with small amounts before using in production.

```

System Requirements

Minimum Requirements

- **RAM:** 4GB
- **Storage:** 500MB free space
- **Network:** Broadband internet connection
- **OS:** Windows 10, macOS 10.15, Ubuntu 18.04 (or equivalent)

Recommended Requirements

- **RAM:** 8GB or more
- **Storage:** 2GB free space (SSD preferred)
- **Network:** Fast broadband for optimal trading
- **OS:** Latest versions for best security

? Frequently Asked Questions

Q

Is my crypto safe with this software?

A: Yes, when used properly. All wallet generation happens locally on your device. Your private keys never leave your computer unless you explicitly export them. The software uses military-grade encryption and follows industry best practices.

Q

Can I use this on multiple computers?

A: Yes, you can install the software on multiple computers. Wallet files are portable - just copy them securely between devices. Remember to keep passwords secure and synchronized.

Q

What happens if I forget my password?

A: Unfortunately, there's no password recovery. This is by design for security. If you lose your password, you cannot access encrypted wallet files. This is why secure password storage is critical.

Q

Do I need internet for wallet generation?

A: No, wallet generation works completely offline. You only need internet for trading operations and balance checking. This ensures maximum security during wallet creation.

Q

How many wallets can I generate?

A: You can generate 1-50 wallets per batch through the GUI, or unlimited through the CLI. For most use cases, 10-20 wallets are sufficient.

Is this legal to use?

A: The software itself is legal - it's just a wallet generator and trading tool. However, you're responsible for following your local regulations and platform terms of service. Use responsibly and ethically.

Support & Contact Information

Getting Help

If you need assistance:

1. **Check this guide first** - Most questions are answered here
2. **Try the troubleshooting section** - Common issues and solutions
3. **Use built-in help** - The app has context-sensitive help
4. **Contact support** - For complex issues

Contact Methods

- **Email Support:** support@your-website.com
- **Community Discord:** <https://discord.gg/your-server>
- **Documentation:** <https://docs.your-website.com>
- **Video Tutorials:** <https://youtube.com/your-channel>

License & Legal

Software License

This software is provided under a commercial license. Key points:

- Licensed for personal and commercial use
- No reverse engineering or redistribution
- Updates included with license
- Support included during license period

Disclaimer

Important Legal Notice

This software is provided "as is" without warranty of any kind. Cryptocurrency trading involves substantial risk of loss. You are solely responsible for:

- Securing your wallets and private keys
- Following applicable laws and regulations
- Understanding the risks of crypto trading
- Platform terms of service compliance

The developers are not responsible for any financial losses, security breaches, or legal issues arising from software use.

Acknowledgments

This software was built using:

- **Electron:** Cross-platform desktop framework
- **React:** User interface library
- **Solana Web3.js:** Solana blockchain interaction
- **BIP39:** Mnemonic phrase generation
- **Node.js:** JavaScript runtime

Special thanks to the Solana developer community for their tools and resources.

Your keys, your crypto, your control.

Thank you for choosing Solana Launch Suite!

Trade safely, profit responsibly.
